Page 5

On page 1, replace the paragraph from line 10 to line 16 with the following new paragraph.

**Marked up version:**

In case of traumatic or circulatory or degenerative events, if there has been a partial and/or momentary interruption of the neuromuscular pathways, the coordination of movements, i.e., the pulses that the brain sends to the nerves by means of the neurons in order to make the person perform movements ordered by the brain, may be damaged, and therefore the patient must undergo rehabilitating treatments in order to [require] regain the motor control he has lost.

Application/Control Number: 10/575,953

September 24, 2007  
Page 7

Please replace the paragraph from line 21 to line 25 of page 1 with the following paragraph.

**Marked-up version:**

However, these techniques, which allow the system to rehabilitate muscle and tendon proprioception sensors, i.e., the sensors meant to detect the quality and quantity of musculo-skeletal contraction/elongation, and somesthetic sensors, i.e., the sensors meant to detect the position of the various segments of the limb, are affected by drawbacks.

Application/Control Number: 10/575,953

September 24, 2007  
Page 9

Please replace the paragraph from line 5 to line 8 of page 2 with the following paragraph:

**Marked-up version:**

Moreover, the use of predefined paths, traced on the surface, without any external aid, does not allow the patient to perform the type of therapy in which the patient is ordered to follow a path by applying a certain pressure with the limb in following said path.

Application/Control Number: 10/575,953

Art Unit: 3736

Page 11

Please replace the paragraph of page 2 from line 17 to line 21 with the following new paragraph.

**Marked-up version:**

The aim of the present invention is to provide a system for performing induced limb movements, particularly for rehabilitating, sports and similar purposes, which allows the patient to perform a given work, without the mandatory presence of an operator who submits to the patient the various types of paths that he must trace with the injured limb or limbs.

Application/Control Number: 10/575,953  
Art Unit: 3736  
September 24, 2007  
Page 13

Please replace the paragraph from line 26 to line 28 of page 2 with the following new paragraph.

**Marked-up version:**

Another object of the present invention is to provide a system for performing induced limb movements that allows the system to have a substantially infinite plurality of different work programs available for the patient.

Application/Control Number: 10/575,953

Art Unit: 3736

Page 15

Please replace the paragraph on **page 3, lines 16-19** with the following new paragraph.

**Marked-up version:**

Further characteristics and advantages of the invention will become better apparent from the description of preferred but not exclusive embodiments of the system according to the present invention, illustrated by way of the non-limiting example in the accompanying drawings, wherein:

Application/Control Number: 10/575,953  
Art Unit: 3736  
September 24, 2007  
Page 17

Please replace the paragraph bridging **pages 3 and 4** with the following new paragraph.

**Marked-up version:**

With reference to the figures cited above, the system according to the present invention, generally designated by the reference numeral 1, comprises data processing means, which are conveniently constituted for example by a personal computer 2 provided with display means 3, which allow the system to display a plurality of paths, which are programmed in the personal computer 2 and which the patient must follow with the injured limb or limbs that he accordingly wishes to rehabilitate or exercise.
